

NAME

getfcomment -- Print Mac OS comment for file

SYNOPSIS

getfcomment [-vhpc] file ...

DESCRIPTION

getfcomment is a command line program which prints out the Mac OS comment on a file passed as an argument.

getfcomment supports the following flags:

- p Name of file will be printed before each comment
- c Output Mac OS Classic Desktop Database comment instead of Mac OS X Finder comment
- v Print version and exit
- h Print help and exit

FILES

/usr/local/bin/getfcomment
