

NAME

rcmac -- recursively lists all files in a hierarchy in the style of `lsmac`

SYNOPSIS

rcmac [directory]

DESCRIPTION

rcmac descends into directory structures and lists every single non-directory file within the structure in the style of 'lsmac'. See the [lsmac\(1\)](#) man page for details. The program accepts only one argument, which must be the path of a directory to descend into.

FILES

/usr/local/bin/rcmac
