

NAME

setlabel -- set MacOS Finder label of files and folders.

SYNOPSIS

setlabel [-vhs] Label file ...

DESCRIPTION

setlabel is a utility for setting the MacOS Finder label of files and folders. This is done by modifying the meta-data flag fields in the HFS file record. The available labels (case sensitive) are:

None Red Orange Yellow Green Blue Purple Gray

An example of typical usage would be:

```
setlabel Gray myfile.txt
```

The following options are supported:

- v Prints version and author and then exits
- h Prints help
- s Silent mode. No output list or error reports are printed.

Please direct queries to Sveinbjorn Thordarson <sveinbt@hi.is>.

FILES

/usr/local/bin/setlabel
