

NAME

wsupdate -- report file system change to Mac OS X

SYNOPSIS

wsupdate [-vh] file ...

DESCRIPTION

wsupdate is a simple command line tool to execute the NSWorkspace method 'noteFileSystemChanged'. This will make the Finder update its open windows. If no arguments are given, the system will receive a general notification. If files are specified, these particular locations will be updated.

Please direct queries to Sveinbjorn Thordarson <sveinbt@hi.is>.

FILES

/usr/local/bin/wsupdate
